Upright EUONYMUS RADICANS

(SARCOXIE)

UPRIGHT
EUONYMUS RADICANS

*Trained as a Column,
Lightly Sheared*

- A New Broadleaf Evergreen
- Hardy as the Oak, throughout the U. S.
- Glossy leaves about one inch long
- Compact and definitely upright
- Excellent for those "hard to grow" places
- Grows rapidly, transplants easily
- Happy in full sun, thrives in dense shade

UPRIGHT EUONYMUS RADICANS was developed by us a few years ago for a specific need—a truly hardy Euonymus that would stand hot, dry summers and varied winter conditions. Nationally advertised by us in American Home, Flower Grower, Popular Gardening and other garden magazines, the plant has been distributed to many parts of the country, with favorable reports from even the most northern areas. Some defoliation in the extreme North, replaced with bright new foliage early spring.

USED FOR SPECIMENS OR IN GROUP PLANTINGS. Normally grows 3½ to 4 ft. Can be grown in a column 5 to 6 feet high by driving a steel reinforcing stake through the center of the plant. The new growth will attach itself with the tiny root-like hold fasts, extensive tying is not necessary.

EXCELLENT FOR HEDGES. Small hedging plants are available. Plant 1 foot apart in the row and keep trimmed, may be kept as low as 1 foot. These compact hedges remind one of the Boxwood, and are much less expensive.

PERFECT AS EVERGREEN VINES. Evergreen vines are attained by planting the small plants close to brick, stone or concrete supports. They will attach themselves by the new growth, fingering out in a beautiful evergreen pattern.

TRULY A HARDY VERSATILE PLANT THAT HAS ATTRACTED ATTENTION FROM PLANT LOVERS ALL OVER THE COUNTRY.
